

## HOW TO USE ZOOM IN CHINA

1. Download of Zoom client. Need to download from either HKUST website in HK or mainland download site.

From HK: <https://zoom.us/download>

From Mainland: <https://zoom.com.cn/download>

2. The URL link the host send to the students for joining the meeting or webinar starts with <https://zoom.us/j>..., Since this is a US site, it cannot access from Mainland. Solution is very simple, just replace “[zoom.us](https://zoom.us)” by “[zoom.com.cn](https://zoom.com.cn)” while keeping everything else in the string to be the same. This will change the domain to a mainland domain and will work.

From HK or elsewhere, use: <https://zoom.us/j/3845769e0>

From Mainland, use: <https://zoom.com.cn/j/3845769e0>

3. To view the recorded video on Zoom cloud storage, we need to do the same for the URL link for the recording link, i.e., replace [zoom.us](https://zoom.us) by [zoom.com.cn](https://zoom.com.cn)

With these 3 steps, Zoom should work in China behind the Firewall.
